0.4_HALF DOUBLE CROCHET

You are now in the middle between single and the double crochet, the half double crochet is less thick than the single one but less loose than the double crochet, being perfectly balanced.

It may seem a bit more difficult than the single crochet, but, as for everything, you'll improve with some training!

To realize it:

- Yarn over the hook before slipping into the third chain from the hook;
- Yarn over again and pull it through the chain, obtaining three loops on the hook;
- Yarn over again and pull it through all three loops on the hook.
- work all the stitches this way until the end of the line, then turn the work around, chain two and do the first half double crochet of the new row in the second stitch from the hook.
